PRNG (Pseudo-Random Number Generator) is a computer algorithm that generates a sequence of numbers that appear to be random. It is used in many applications, including video games, cryptography, and simulation. The PRNG generates a sequence of numbers that are used to determine the outcome of events in a game, such as the position of a character or the result of a dice roll. The PRNG is also used in cryptography to generate random numbers for encryption and decryption. The PRNG is a key component of many systems and is essential for ensuring the security and integrity of data.

Many fans were surprised and Terrifier 2 was approved for release at all, as Australia has some of the strictest film censorship laws in the world.
