[Odd Numbers - Definition, Properties, List, Examples - SplashLearn](#)

A number which is not divisible by 2 is called an odd number. An odd number always ends in 1, 3, 5, 7, or 9. Examples of odd numbers: 51, 543, 8765, 97, 9, etc. An odd number is always 1 more than (or 1 less than) an even number.

If a number divided by 2 leaves a remainder of 1, then the number is odd. You can check for this using $\text{num} \% 2 == 1$.
