Running a VM on a NAS takes a lot of resources so you would need to choose one with good processor and RAM.

An alternative (if you want to run a virtualized Linux app) is docker. both

QNAP and Synology have Docker support which takes very little system resources.

The baseline functionality of network-attached storage devices

has broadened to support virtualization. High-end NAS products might

also support data deduplication, flash storage, multiprotocol access and data

replication.
