There are 9 squares involved with the 7, so $9 \times 8 = 72$ other squares. These other squares contain the 92 other mines. So the number of grids with a 7 at a particular spot is $8 \times 92 = 736$. That is out of a total of $\binom{480}{99}$ different grids.

Probability of getting a 7 in Minesweeper - Math Stack Exchange

We have $4 \times 92556 = 370224$ ways for an easy grid to have an 8 somewhere. Out of the 1.88 trillion total easy grids, this gives a probability of about $\frac{370224}{1.88 \times 10^{12}}$. So, very rare indeed!

data-ved="2ahUKEwju8r6PyMuDAXUILUQIHV8OCGsQFnoECAEQDQ" href="{href}">probability - How rare is it to get a R\$8\$ in minesweeper?
